

MICROSOFT CERTIFIED SYSTEMS ENGINEER (MCSE)

Objectives:

The Microsoft Certified Systems Engineer (MCSE) credential is the premier certification for professionals who analyse the business requirements for a system architecture, design solutions, deploy, install, and configure architecture components, and troubleshoot system problems.

With the rapid change of technology in today's competitive world, companies must choose the most secure, powerful, and effective solutions available. Likewise, successful information technology (IT) professionals must keep up with this accelerating pace of change.

Today, thousands of businesses are migrating to Microsoft Windows 2003 operating system a reliable and proven platform that has become known as "the generation of computing". Are you ready to help them?

The new MS Windows 2003 Track is designed for information technology professionals working in a typically complex computing environment of medium to large organisations. A Windows 2003 MCSE candidate should have at least one-year experience implementing and administering a network operations system.

Microsoft Official Curriculum (MOC) is designed to give you hands-on, real-world knowledge and skills. Courses appeal to a broad variety of IT professionals from Windows 2003 newcomers to seasoned pros and are focused on job-related tasks. Getting trained on Windows 2003 will give you a competitive edge in your career and help you become a vital resource in building technical solutions today and for the future.

Courses are available in a variety of formats to fit your schedule and learning goals. Our instructor-led training, delivered through our premier partner channel, is a great way to get training "direct from the course". It compliments your job experience and enhances your capabilities. If your pursuing the MCSE certification, instructor-led training is your assurance that you'll get the practical, hands-on training to help prepare for certification.
